

Built for community college student support offices

Students at your college qualify for more support than they ever claim - because each program has its own form, its own paperwork, and its own line to stand in. PathCheck replaces that with one plain-language application. Your eligibility rules run the moment a student submits, so they see what they qualify for immediately and your staff review decisions instead of re-keying paper.

TODAY

- A separate form for every program
- Students self-select and miss what they qualify for
- Staff re-key the same data 4-5 times
- Weeks of email back-and-forth on missing documents
- No record of why a decision was made

WITH PATHCHECK

- One intake form for all programs
- Instant screening against your written rules
- Data entered once, shared across programs
- Missing items listed for the student on day one
- Every decision logged with actor and timestamp

What a pilot delivers

2 programs

configured with your actual eligibility policy

< 10 min

from student submission to eligibility decision

1 queue

for staff, sorted by outcome, missing items and risk

Full audit

of every decision, for compliance review

Pilot scope - \$3,000-\$4,000, first year

- Unlimited student applications for the pilot term
- Two eligibility programs configured and tested with your staff
- Unlimited staff accounts with role-based access
- Student status page and missing-item follow-up
- CSV exports for reporting and reconciliation
- Security, privacy and FERPA-alignment documentation for procurement
- Email support and quarterly check-ins

Implementation timeline

- Week 1** Kickoff. We review your two eligibility policies and intake questions.
- Week 2** Programs and rules configured. You review the student form end to end.
- Week 3** Staff training session and queue setup. Test submissions reviewed together.
- Week 4** Go-live. Application link published to students; weekly check-ins begin.

Ready for your security and procurement review

Data handling

Student records encrypted in transit and at rest, isolated per institution at the database layer.

FERPA alignment

Institution owns its data; PathCheck acts as a school official under the legitimate-interest exception.

Access control

Role-based staff access, full audit trail of every view, edit and decision.

Documentation

Security overview, privacy notice, architecture and data-flow summaries available on request.
